

## Domino SWM Storm Water Maintenance

Water has become a precious resource in Australia. Now, more than ever, industry must incorporate a rain water harvesting catchment system at their premises to be used either throughout the premises or in their process.

Rain events in Australia are notoriously short and heavy and therefore storage capacity should be maximised.  
\*Many sites are large and rain water can be harvested for re-use from both the roof (or rooves) and hard stand areas.

*\*This storage can be either above or below ground.*

Legislation is pending that these large volumes of stored water may have health issues and that the harvested water is to be maintained in a safe and clean condition. Also, when being used in a process within a factory or washing facility it may need treatment to maintain equipment integrity or warranty .

Everything Water has developed systems to cater to all needs in both the Storm Water Maintenance (SWM) and Storm Water Transfer (SWT)

### Storm Water Maintenance

The degree of treatment during maintenance is determined by 2 factors:

- + The contamination level of the harvested rain water
- + The storage capacity of tanks to be maintained.

While harvesting from the roof may be considered relatively contaminant free, they are often subject to bird congregations resulting in excrement being present. Harvesting water from hard stand areas can produce a variety of problems in the form of solids, oils and even pH.

*Due to the sheer number of variables related to site specific issues virtually all of Everything Water's systems are custom built to suit the site.*

**Please read on to see our full range of base systems.**

### Everything Water PTY LTD

#### VICTORIA

7 Ventnor Street, Balwyn North VIC 3104

## Domino SWM-1U

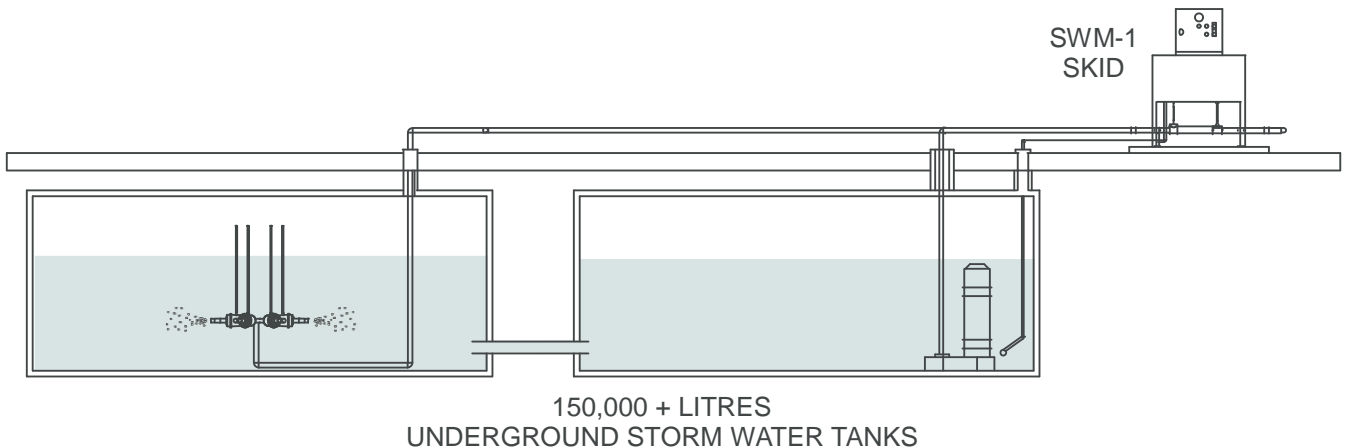

### Storm Water maintenance - Roof Capture Only

The Domino SWM-1U is designed to maintain **underground** storm water captured from roofed areas only. The treatment is provided by oxygenation and chlorine sterilisation. The harvested water is circulated by submersible pumpset and discharges through venturi fed Vortex Aerators. During circulation the chlorine level is monitored and dosed accordingly.

#### Features

- Low running costs
- Automatic chlorination
- Automated Oxygenation
- Scalable
- Small Footprint

## Domino SWM-1A

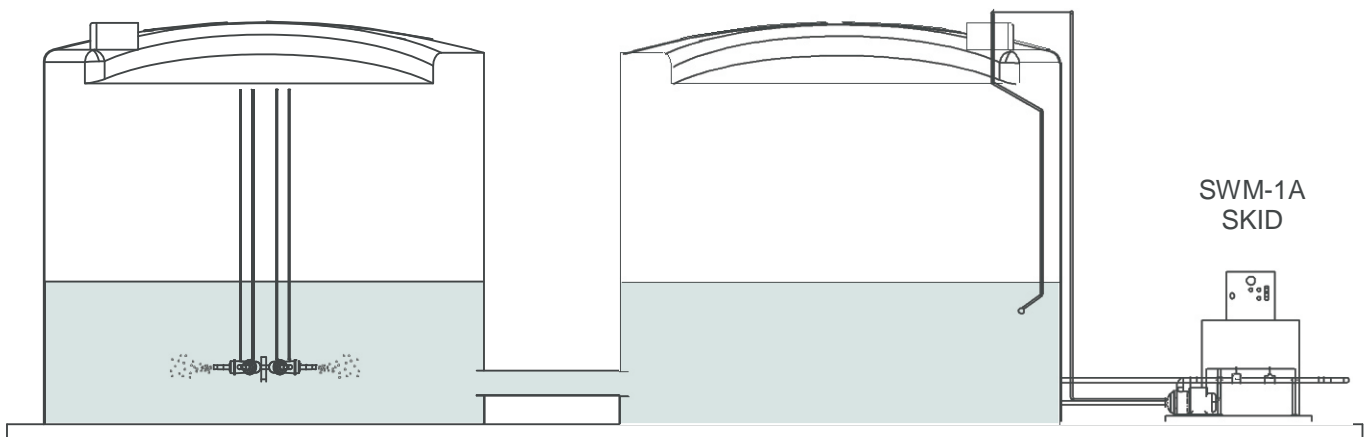

### Storm Water maintenance - Roof Capture Only

The Domino SWM-1 is designed to maintain **above ground** storm water captured from roofed areas only. The treatment is provided by oxygenation and chlorine sterilisation. The harvested water is circulated by centrifugal pumpset and discharges through venturi fed Vortex Aerators. During circulation the chlorine level is monitored and dosed accordingly.

#### Features

- Low running costs
- Automatic chlorination
- Automated Oxygenation
- Scalable
- Small Footprint

150,000 + LITRES  
ABOVE GROUND STORM WATER TANKS

## Domino SWM-2U

### Storm Water Maintenance - Roof & Hard Stand Capture

The Domino SWM-2U utilises all the features of SWM-1 with the addition of sediment filtration to 1 micron. Two EW stainless steel washable bag filters are incorporated onto the skid.

#### Features

- Low running costs
- Filtration to 1 micron
- Scalable. Base unit capacity can easily be upgraded to suit your needs.
- Small footprint

## Domino SWM-3U

### Storm Water Maintenance - Roof & Hard Stand Capture + Oil Removal

The Domino SWM-3U utilises all the features of SWM-2 with the addition of a Mycelx Hydrocarbon removal

#### Features

- Low running costs
- Filtration to 1 micron
- Scalable. Base unit capacity can easily be upgraded to suit your needs.
- Small footprint
- Effective hydrocarbon removal
