Features & Benefits

- Sturdy stainless steel construction.
- Convenient diagonally opposed lifting handles.
- Hydraulically designed to receive maximum flow.
- Screens silt, leaves, screws, butts etc.
- Protect against suction line blockage.
- Protect pumping equipment.
- Prevent pollution of waterways.

Silt Trap (Stainless Steel)
Part No: SILT600

Silt Trap (Stainless Steel)
Part No: SILT450

Installation

When being used in trafficable areas, the EH600 collection pit must be installed with a concrete collar to fully support the top of the pit. This collar should be a minimum of 150 x 150mm around the top perimeter of the pit. A support brace is provided and when fixed as per instructions, will prevent deformation of the pit during back fill procedures. The support brace can be re-moved after installation is complete.

EH600 Collection Pit

Dimension

CODE	OVERALL	DEPTH	FLAP	THICKNESS
SILT600	660mm x 60mm	100mm	40mm	0.9
SILT450	510mm x 510mm	100mm	40mm	0.9
